With Capital and maintenance budgets being smaller than ever these days, MSB Plate Heat Exchanger Reconditioning Services have never been more in demand.

Plate Heat Exchanger Reconditioning can help you save valuable time and money in the long run. Units that need to be cleaned can cause higher operating cost or less product output due to buildup of sediment accumulation and fouling.

MSB's Plate Pack Exchange Program gets you up and running in a minimal amount of time.

Plate Heat Exchanger failures during peak times can cause lost manufacturing time and lost profits due to the high cost.

In order to avoid these costly problems, it is highly recommended that you have your Heat Exchanger Plates cleaned on a regular basis. Preventive maintenance is the best way to prevent costly problems in the future. Let us set up a preventive maintenance program for you now.

Before

After

Before and After photographs showing the kind of buildup that your plates can experience. The dirt on the first plate forms a layer between your heat transfer surface and the fluid. This causes a much lower U-value and decreased heat transfer

Our Service will Exceed your Expectations
