*How do we do it?*

## *Soda Blasting*

**What is Soda Blasting?** Blasting is a process that uses Baking Soda (Sodium Bicarbonate) propelled by compressed air through special blasting machines to remove surface contaminants. Baking Soda is water soluble and **environmentally safe**. It cleans the most delicate surfaces, while protecting workers and the environment. It is a revolutionary concept that strips and cleans all surfaces in a fraction of the normal time required.

MSB, Inc provides the solution you have been waiting for. Listen and lend themselves very well to Soda Blasting.

### Applications:
